

# CATSaveManagement

PLM INNOVATION

A powerful tool for efficient renaming and saving of CATIA models

*During the last years the product complexities and CAD data volume have increased constantly. Nowadays a new construction is not beginning by "zero". Rather company specific templates are the basic for new constructions. The challenge often lies in a time consuming modification of the naming and of cause in managing and saving of the new parts and assemblies. Also the associativity with 2D-drawings must not be lost.*

These requirements can be fulfilled with CATIA V5 in the default configuration only by time-consuming manual tasks.

This is the focus of CATSaveManagement, which brings with a lot of useful functions a quick amend.

## The most important functions of CATSaveManagement

- Renaming
- Translate
- Save as
- Synchronize
- Geometry simplification (Dummy)
- Rule based renaming and saving
- Exclusion criteria
- Remember
- Keeps associativity to Drawings
